Does your PLC
modem sail
over the
channel storm?
Prove it on
WiTiKee Emulator!

WiTiKee

presents the HACE, State-of-the-art
PLC Hardware Channel Emulator

HACE is the first patented and commercially available solution for the full power line communication channel hardware emulation. It offers realistic PLC channel and line impedance emulation both for narrow band and broad band operation conditions.

HACE is the perfect choice for testing the performance and the analog front-end of your PLC modem.

HACE can be tailored to your needs and configured to reproduce the characteristics of typical in-home or outdoor applications, or it can be designed to replicate an application scenario that you specify.
